

How much weight can an Electric Stacker lift?

An electric stacker can lift items weighing 408 kilograms (or about 900 pounds) to an average height of about 1.3 meters or roughly 4.26 feet. With the help of a pulley system which the stackers ultimately replaced, the same feat would have taken five to six men. A typical speed of twelve meters per second (or about 39.37 feet per second) gives the electric stacker the capability to stack objects faster. The latest electric stacker equipment comes with a heavy duty electro-hydraulic power pack. This increases their power to lift material manifold.
